

## Infertility Treatment

**Medicare Tour India** offering **Woman friendly Infertility** treatment facility in India. Our associated hospitals are managing and handling as per International standards. Hospital with separate Cryobanking area and a very private Andrology area. Well trained Embryologists work to ensure good success rates comparable to any International ART clinics.

To manage most of the young couple who have a desire to have a child but are unable to have on their own, would probably need some good counseling, lifestyle modification and a good one to one talk with **the Doctor, who is fluent in Arabic** to alleviate anxiety

Screening out the “really treatment requiring couple” is an expert’s job and the Infertologists at our associated Hospital are qualified and equipped to do so. A couple may require to go to do advanced Diagnostic and treatment modalities. This include Hystero-Laparoscopic procedures. Further to this, they may require advanced treatment modalities like IUI, IVF, and ICSI with or without TESE or PESA. Resulting excess Embryos may be frozen for future use.

In case of women who have permanent disability in their uterus like scarring from previous surgeries, Tumour growths or abnormal condition at birth, a Surrogate can be commissioned to carry their child. In case of very faulty Gametes, other legally approved treatment procedures can be opted. These procedures are done only after proper informed counseling and with Legal documentation.

The Hospitals provide extreme privacy in the ART O.P.D inside hospital premises assessing all the emotional values of individuals. After the initial diagnosis or evaluation of the previous treatment records, the doctor will give you an indication about your condition, treatment options available and approximate cost of treatment.
